

Response to SA Nuclear Cycle Royal Commission.

The Commissioner, Mr Scarce, is to be congratulated on this excellent document that so clearly states the case for expansion of the nuclear fuel cycle in South Australia.

I agree with all of the Tentative Findings. I support the expansion of the nuclear industry in SA.

I base this view on over 30 years' experience working with radioactive compounds, in Australia, the US and the UK. I am aware that the risks associated with the nuclear fuel cycle are easily quantifiable and manageable, and are often much lower than the risks associated with alternative energy sources such as coal.
